

## **STUDENT IMMUNIZATION AGREEMENT**

---

To comply with the Ontario Occupational Health and Safety Act and OMA/OHA protocols under Regulation 965 of the Public Hospitals Act, students (working in a hospital environment) are required to have the immunizations listed below; be free from active tuberculosis; and participate in baseline skin testing. Given our patient population, we strongly recommend that all students have an influenza vaccination. If an outbreak occurs, students who have not been vaccinated will not be able to continue their placement until they have finished a course of Tamiflu™ Prophylaxis. **NOTE:** Any costs associated with the completion of this form are the responsibility of the student/educational institution.

**Required:**

- Measles, Mumps, Rubella/Rubeola (German and Red Measles)
- Varicella(ChickenPox)

**Tuberculosis (TB) Status**

Prior to placement, students are required to have a documented 2-step tuberculosis skin test done prior to start date. This involves the planting of a tuberculin skin test in the forearm, having it read by a licensed Healthcare Provider 2-3 days later and if negative, the process will be repeated in the other arm 1-3 weeks later. The 2-step skin test identifies the truly positive skin test. It is essential to have accurate baseline information at the beginning of your placement as this is the comparison that is used in the event of an exposure.

**Not mandatory but recommended for the protection of the student:**

Tetanus/Diphtheria      Influenza Vaccine      Hepatitis B Vaccine

Proof may take the form of

1. Immunization Certificates
2. Antibody Titre results
3. Registration in a program where confirmation of 1& 2 are available upon request

I have shown evidence of my immunization status to Baycrest, prior to my placement.
